

PYTHON TERM:

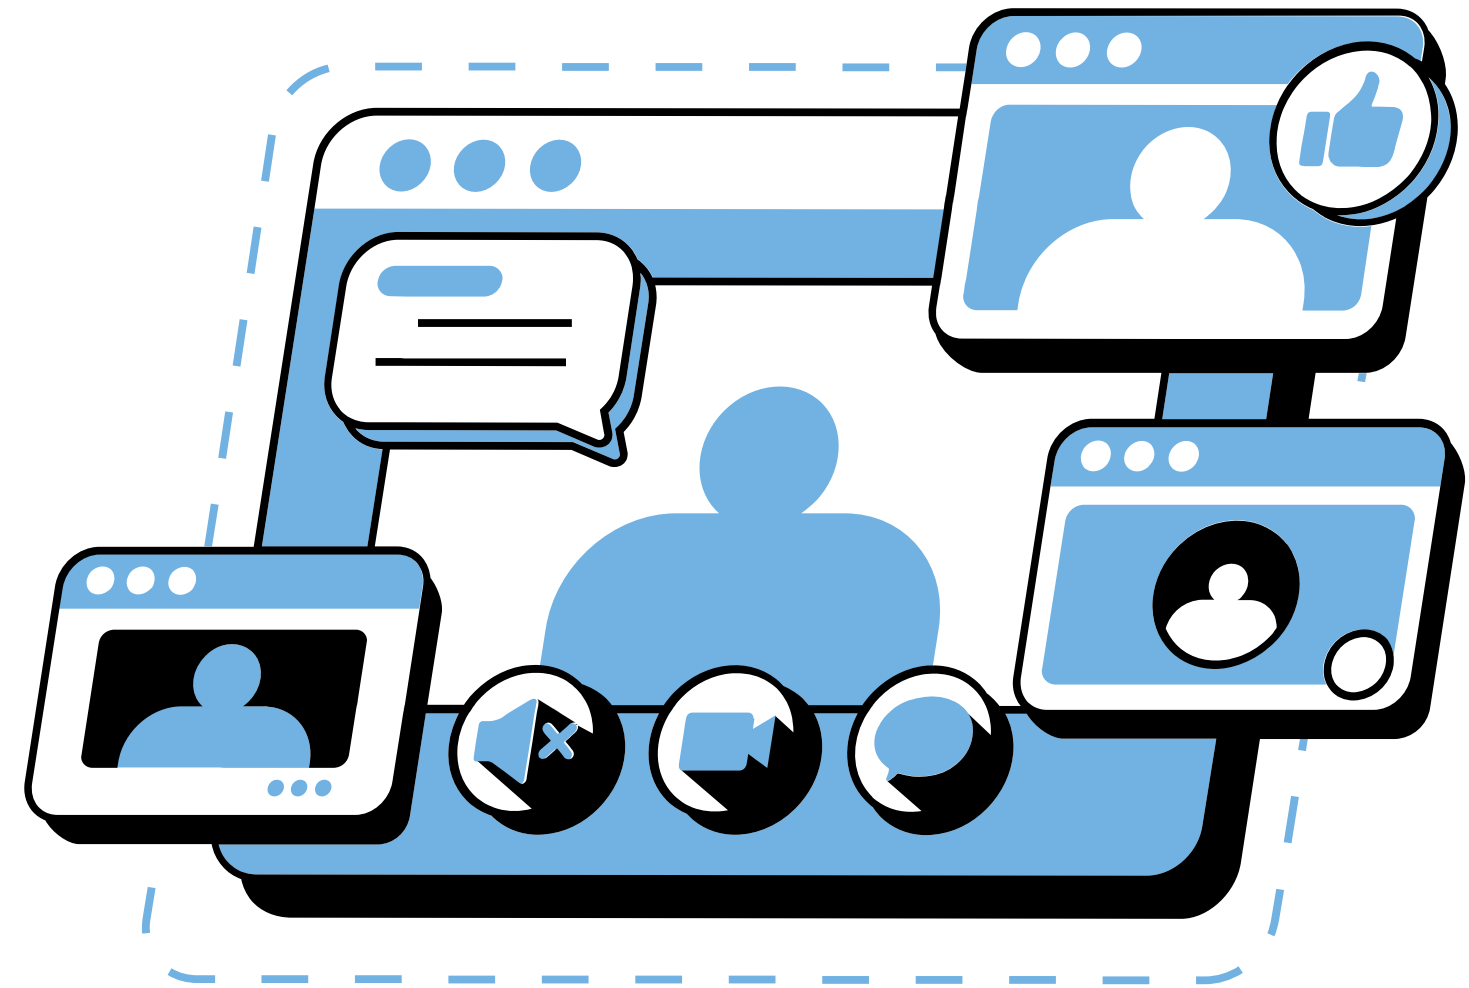

LIST

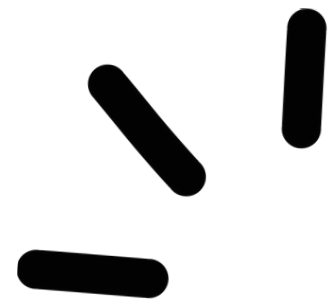

Shensi Chinolla, Melissa Lopez, Aileen Magadan y Renata Ontiveros

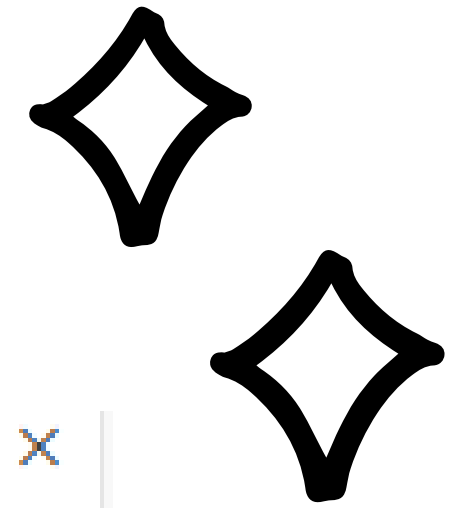

DEFINITION

The list function in python creates a list which is an ordered collection of items. It can be empty or by converting other information into list form.

EXAMPLE

[Preview] README.md

 *list-fun-pretice.py*

 *g.py*

U X

 *g.py* > ...

```
1  #Creating an empty list
```

```
2  my_list = list()
```

```
3
```

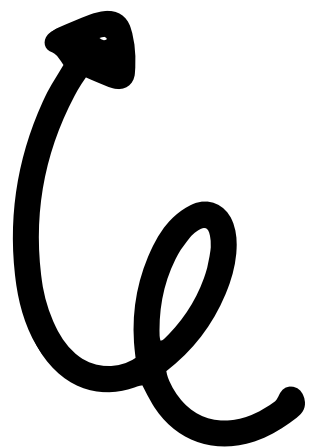

```
4  number= (1, 2, 3)
```

```
5  converted_list = list(number)
```

```
6
```

```
7
```

```
